Visual design

Signalor’s design system, restyled in the Cal Hacks 13.0 palette. Same type, same rhythm, same one-accent discipline — the gilt becomes blue, the ink becomes navy. This document is the reference; the app is written fresh at the event.

SOURCE STYLE	Signalor design system (DESIGN_SYSTEM.md, tokens.css)
PALETTE FROM	calhacks.io, observed Oct 24, 2026
PRODUCT NAME	Open — working frame: company evidence index
COMPANION	Product design PRD (separate PDF)

01 · COLOR

The palette

One accent, as in Signalor: blue is the stroke and the figure, never a filled block. Structure comes from whitespace and hairline rules. Grass is a rare tint, never text. Values pulled from the live Cal Hacks site, not generic Berkeley colors.

Brand blue
`#0560b4`
The one accent — strokes, figures, links

Accent deep
`#044a8a`
Hover; accent running text

Sky
`#75bcff`
Dark-theme accent; light tints

Periwinkle
`#a7a5f9`
Secondary tint; chart accents

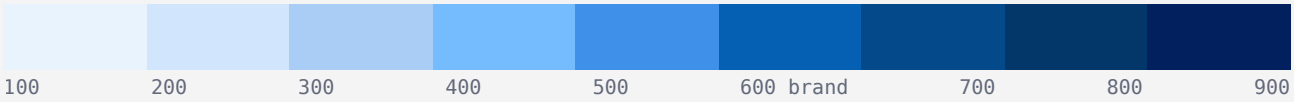

Deep navy
`#02205e`
Dark-theme ground

Paper
`#f5f4f4`
Light-theme ground

Ink
`#101c36`
Light-theme text (navy ink)

Grass
`#b9df74`
Sparing highlight tint only

Accent ramp

Semantic and sentiment tones carry over from Signalor unchanged — archival, desaturated, readable as ink: supported #3f6b4a, unresolved #8a7238, contradicted #8c3a34, each with a tint and border companion; badge text uses the deeper neutral #6f5b2a and, on dark, the lifted set #93c29a / #d4ba76 / #dda19a so small labels stay above 4.8:1 on their tints. Brand blue on paper measures about 5.4:1; sky on navy about 7.6:1, so accent text holds at body sizes.

02 · TYPOGRAPHY

Three faces, unchanged from Signalor

Cormorant

DISPLAY & HEADINGS
Cormorant Garamond 400/600
h1–h6, hero, buttons, figures

Lora body copy

BODY
Lora 400/500/600
Paragraphs, captions, table cells, inputs

DM Mono 0123

DATA
DM Mono 400
Code, IDs, counts, timestamps

Numbers set tabular wherever they read as figures. Bold is retired — 600 is the ceiling. Display sizes drop to 400. The 28px leading unit and 14px half-step set all rhythm; edges are clamp(20px, 5vw, 76px), measure 60ch, content width 1220px.

LEVEL	SPEC	USE
h1 display	`clamp(44px, 6.2vw, 84px) / 1.08 / 400`	Hero, page titles
h2 section	`24–30px / 600`	Section titles
Body	`15–16px / 28px line`	Running copy, justified in columns
Stat numeral	`clamp(34px, 3.4vw, 48px), tabular`	One blue-accent numeral per row at most
Kicker	`uppercase, letterspaced, accent-700`	Data and section labels only

03 · LIGHT THEME

The system applied

COMPANY EVIDENCE INDEX · CAL HACKS 13.0

Apple Inc. (AAPL)

Claims, citations and change history for Apple, drawn from public sources.

12,480	318	8 qtrs
Claims indexed	Cited contradictions	Sentiment history

SUPPORTED UNRESOLVED CONTRADICTED

Open the ledger | See methodology

ILLUSTRATIVE DATA · not actual Apple figures

Do

- Whitespace on the 28px grid as the structure
- One hairline where separation is ambiguous
- One blue numeral per stat row; tabular figures
- Outlined, squared buttons — never filled

Don’t

- Boxes, cards with borders, nested borders
- Gradients, glow, drop shadows, hover lift
- Rounded pills, filled accent buttons
- Saturated semantic colors, font-weight 700

04 · DARK THEME

Navy ground, sky accent

COMPANY EVIDENCE INDEX · CAL HACKS 13.0

ILLUSTRATIVE DATA · not actual Apple figures

Same one-accent logic inverted: the ground is deep navy #02205e, the accent lifts to sky #75bcff, and semantic tones lift one step so they hold on dark. Surfaces step #02205e → #072a6e → #0c347e; the scrim stays darkness and never derives from text.

05 · TOKENS & MAPPING

What changed from Signalor

TOKEN	SIGNALOR	CAL HACKS ADAPTATION
`--color-brand`	`#b68235 gilt`	`#0560b4 brand blue`
`--color-brand-hover`	`#7d5411`	`#044a8a accent deep`
`--bg (light)`	`#f3f2f2`	`#f5f4f4 paper`
`--text (light)`	`#201f1d warm ink`	`#101c36 navy ink`
`--bg (dark)`	`#171614 ink`	`#02205e deep navy`
`--color-brand (dark)`	`#d3a459`	`#75bcff sky`
`--font-heading / sans / mono`	Unchanged: Cormorant Garamond / Lora / DM Mono	
Rhythm, radius, semantics	Unchanged: 28px leading, squared corners, archival tones	

The full adapted token sheet ships with this document as `cal-hacks-tokens.css` — same token names as Signalor's file, so values drop straight into a fresh stylesheet.

> **Scope note.** This is a design reference: token values, type, and a visual spec. No Signalor component code carries over — the hackathon app is implemented fresh at the event, per the published rules. Colors come from the public Cal Hacks site for event spirit; this is not Cal Hacks official branding, and no product name is chosen yet.
